Objective

Aspiring Full Stack Developer with hands-on experience in building web applications, mobile applications using Flutter, React, HTML and MySQL. Skilled in REST API development, database management, authentication, and AI-based integrations. Seeking an entry-level role to apply my technical skills and grow in a dynamic organization

Technical Skills

- Languages: Python, JavaScript, PHP
- Frontend: HTML, CSS, React, Flutter
- Backend: Flask, Node.js
- Database: MySQL, SQLite, MongoDB
- Tools: Git, VS Code
- Concepts: REST API, CRUD Operations, Authentication, OOPs concepts

Education

Madras Christian College | Chennai
MCA | 79%
Bon Secours College for Women | Thanjavur
BSc Computer Science | 85%
Rahmath Matric Hr. Sec. School | Muthupet
HSC | 90%

Internships

I. Web Development Internship Training course certified by Skill Vertex. - **Jan-2024**

- Built a **responsive personal portfolio website** on responsive design.

II. Full Stack Web Development Internship at **Oriz Software Technology Pvt. Ltd.** - **May-2025**

- Worked on **full stack-web development**, contributing to both frontend and backend modules.

Certifications

- Learn About Being a Front-End Developer certified by IBM skill build
- Machine Learning and Data Analytics with Python certified by MSME-Technology Development Center (PPDC)
- Training on Cyber Security and Digital Safety Essentials offered by Naan Mudhalvan.

Experience

I. AI-Based Face Recognition for Login and Attendance System - KOLOZEN Tech World Private Limited

Front-End: Flutter, Dart Language

Back-End: Flask (Python (Deep Face)), Rust (Actix-web)

AI/ML: Deep Face, TensorFlow (Basics)

Database: SQLite

- Developed an AI- based face recognition–based login and attendance system.
- Enabled secure, contactless authentication using AI-based facial recognition.
- Utilized Deep Face library for facial recognition and identity verification.
- Built an admin dashboard for user management, attendance logs, and report generation.
- Integrated REST APIs to enable communication between frontend, backend, and AI services.

Project

I. Doctor-Patient Portal for Lung Diagnosis

Front-End: React

Back-End: Flask (Python), node.js with Express

Database: MySQL Workbench

- Developed a **healthcare web application** using React and Flask.
- Implemented role-based access for doctors, patients, and admin.
- Applied U-Net based image segmentation concept for lung image analysis and prediction.
- Designed REST API structure for handling file uploads and report generation with confidence score.
- Managed data using MySQL with CRUD operations.
